

New Submerged Arc Welding Machine Supporting Thick Plates Welding through Digitization

WB-S1500 & Digital Automelt

The ultimate in de-skill through digitization

- **Numerical** control of welding conditions and memorization of welding conditions are possible.
- **Accurately reproduces** welds in the test environment in the field
- Flexible adjustment of **phase difference and** AC parameters

Easy to install and can be used for all types of welding

- **No need for high-capacity input equipment** (breaker lowered from 700A to **300A**)
- High output of 1500A and **abundant welding** modes **make** it applicable to all applications
