

Centralized Robot Operation Management

Robot Management System

Challenges in Production Sites

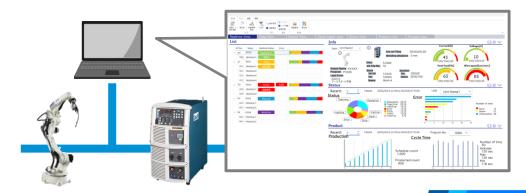

Customer Concerns

- Unable to identify causes of abnormalities or stoppages
- Want to track maintenance schedules
- Want to avoid large-scale IT investments

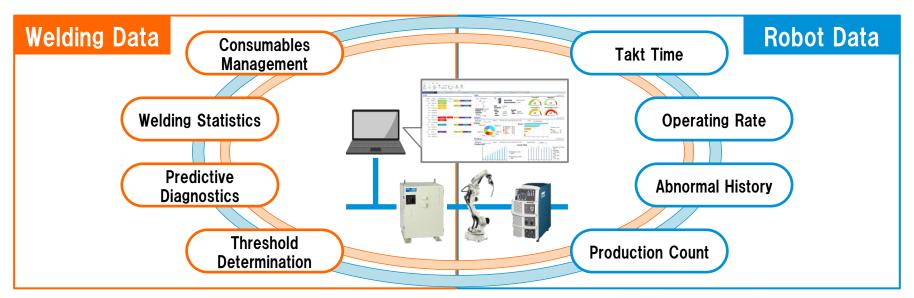

Supporting Challenge Resolution by Managing Both Robots and Welding

Collect and visualize various robot and welding data Three features support problem-solving

- 1 Data Analysis Support 2 Diagnostic function 3 Easy Implementation

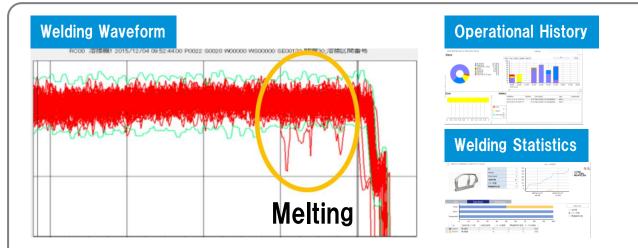

Data Analysis Support

Records various data at intervals as short as 0.1 milliseconds

► Accurately identify stoppage factors with more realistic data

Production Status

White the status of the s

High-Precision Data for Detect abnormalities

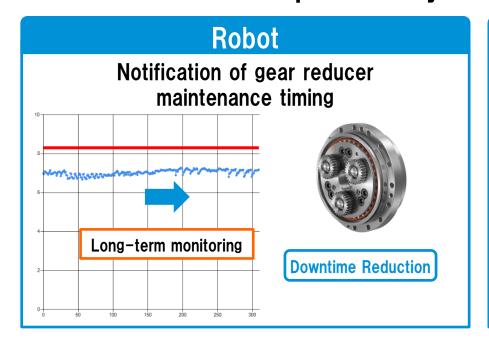

Easily obtain accurate information
Contributes to investigating stoppage causes

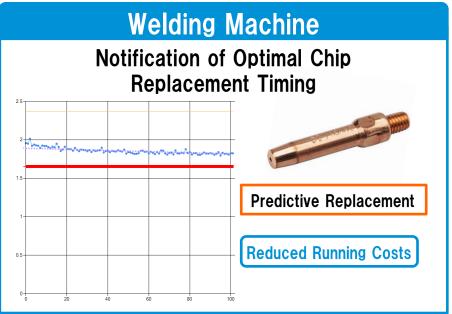

Diagnostic Function

Analyze and diagnose welding machines in addition to robots Reduce contact tip costs by 20%*

Based on our research

No dedicated hardware required

Install on your PC and start using it immediately

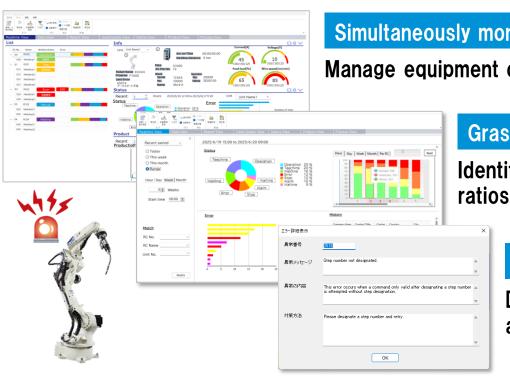

- No space concerns
- Works seamlessly with existing systems

Simple and low-cost implementation

Welding Robot Centralized Management System Demonstration

Intuitively track everything from overall operational status to detailed error displays

Simultaneously monitor the status of up to 32 robots

Manage equipment operational status in bulk

Grasp operational history

Identify issues from time-series operation ratios and error histories Identify issues

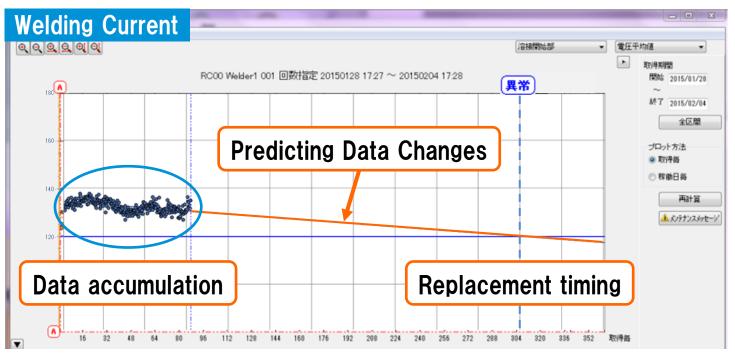

Display detailed error information

Display detailed error messages to and verify solutions

Welding Robot Centralized Management System Demonstration

Predict welding condition trends and replace the welding tip before defects occur

* Depending on the customer's welding environment, predicting welding condition changes may be difficult.

The Welding Robot Centralized Management System to improve your production efficiency.
